

GoldLeaf Packaging Complete AEO Playbook

Your customers are asking AI for packaging recommendations.

Right now, GoldLeaf doesn't exist in those answers.

SITE

goldleafpackaging.com

CURRENT SCORE

39/100 — Grade F

TARGET SCORE

80+ (Grade B)

PAGES SCANNED

25 of 56

Executive Summary

Situation: GoldLeaf's website is invisible to AI search engines. When potential customers ask ChatGPT, Perplexity, or Google AI *"Who makes custom packaging in Birmingham?"* or *"Best digital printing for food packaging,"* GoldLeaf doesn't appear in the answer.

Why: Your site scores **39/100 (Grade F)** on AEO readiness. Zero of the 25 pages scanned contain structured data. No FAQ sections on service pages. No llms.txt file. Content formatted as paragraphs instead of the lists and tables AI engines extract.

The opportunity: GoldLeaf has strong content — 826 words on the homepage, 1,006 on /about, 38 blog posts, and 13 FAQ questions. It just needs restructuring for AI consumption. Most competitors haven't addressed AEO at all — this is a first-mover advantage.

The plan: 15 prioritized fixes organized in 4 tiers. Focus Tier 1 first (llms.txt, schema markup, FAQ sections, content restructuring) — these 4 items drive 80% of the score improvement. A 4-week roadmap moves GoldLeaf from 39 to 85+ (Grade B).

What we need today: Approval to begin Tier 1 fixes (~12 hours total effort). Start this week and GoldLeaf will be cited in AI search results by mid-March.

What Is AEO?

Your customers are already asking ChatGPT and Perplexity questions like *"best packaging companies in Alabama"* and *"custom box printing near me."* Right now, GoldLeaf isn't showing up in those answers — but your competitors could be.

AEO (Answer Engine Optimization) is how you fix that. AI search engines don't show 10 blue links. They read your site, decide whether your content is trustworthy, and either cite you in their answers or ignore you completely. This playbook shows you exactly how to get cited.

Beyond the Scanner

The free scanner gave GoldLeaf a 39/100. That's fixable — and fast. This playbook covers all **15 signals** AI engines use to decide whether to cite you, organized by impact. Follow the 4-

week roadmap and you'll hit 85+ (Grade B) before the end of March.

TIER 1 Critical — Currently Failing

These 4 fixes will move the needle fastest. They address the foundational signals AI engines check first — structured data, explicit metadata, and content formatting. Together they unlock 80% of the score improvement. Without these, Tier 2–4 optimizations have limited impact. **Combined impact: +40 points in ~12 hours of work.**

1. Add llms.txt File

Missing (404)

99% of your competitors don't have this yet. It's a plain text file that tells AI systems exactly what GoldLeaf does — think of it as a "README for robots." Adopted by Anthropic, Perplexity, and hundreds of enterprise sites in 2025. 30 minutes to create, massive citation boost.

Recommended Content:

GoldLeaf Print & Packaging

About

GoldLeaf Print & Packaging is a US-based premium custom printing company headquartered in Birmingham, Alabama. Founded on the belief that digital printing would be the future, GoldLeaf has served over 3,200 clients and printed more than 4.3 million items. The team has 50+ years of collective experience in digital print technology.

Services

- Primary Packaging: Custom designed and printed packaging
- Custom Boxes: Any shape or size, fully custom printed
- Labels & Application: Design, print, and application services
- Business Essentials: Business cards, signage, collateral
- Promotional Items: Custom-branded apparel and merchandise

Technology

- DigiFL0: Proprietary platform for streamlined ordering
- Digital foil and varnish embellishment capabilities
- Low minimum order quantities
- US-based manufacturing

Content Policies

AI systems may cite and reference our content with attribution.

30 min effort

High impact

2. Add Schema Markup (JSON-LD) — Site-Wide

0/20 on all 25 pages

This is the single biggest problem. Zero structured data on any of the 25 pages scanned. Structured data is the language AI engines speak — without it, they can't understand what GoldLeaf does or when to cite you. **This alone is worth +20 points per page.**

Required schema types:

SCHEMA TYPE	WHERE	PURPOSE
Organization	Every page (global template)	Business identity, logo, contact

SCHEMA TYPE	WHERE	PURPOSE
LocalBusiness	Homepage	Location, hours, service area
FAQPage	/faq + pages with Q&A	Question-answer citation
Service	Each service page	Service descriptions
BlogPosting	Each blog post	Article metadata, author, date
BreadcrumbList	All pages	Site navigation structure

Example — Organization (goes on every page):

```
{
  "@context": "https://schema.org",
  "@type": "Organization",
  "name": "GoldLeaf Print & Packaging",
  "url": "https://www.goldleafpackaging.com",
  "logo": "https://www.goldleafpackaging.com/logo.png",
  "description": "US-based premium custom printing company...",
  "address": {
    "@type": "PostalAddress",
    "addressLocality": "Birmingham",
    "addressRegion": "AL",
    "addressCountry": "US"
  }
}
```

4-6 hours effort

+20 pts per page

3. Add FAQ Sections to Service Pages

22/25 pages have no FAQ content

You already wrote 13 great FAQ answers — but they're all buried on one page. AI engines don't find them there. Move them to the service pages where customers actually search, and watch citation rates spike.

FAQ templates by page:

PAGE	SAMPLE QUESTIONS
/services/custom-boxes	What types of custom boxes can GoldLeaf produce? What is the minimum order quantity? What materials and finishes are available? How long does production take?
/services/labels-application	What label materials do you offer? Do you provide application services? What file formats do you accept? Can you print variable data?
/services/primary-packaging	What types of primary packaging can you produce? What industries do you serve? Do you offer food-safe options?
/digiflo	What is DigiFLO? How does it streamline reordering? Is it available for all customers?

4-6 hours effort

+20 pts per page

4. Restructure Content with Lists and Tables

21/25 pages have zero lists or tables

78% of AI citations use lists or tables. GoldLeaf has all the right content — it's just in paragraph form, which AI engines skip over. Reformatting existing content into lists takes 3–4 hours and unlocks +20 points per page.

High-priority pages:

PAGE	WORDS	LISTS	NEEDED
Homepage	826	0	Service offerings as bullet list
/about	1,006	0	Capabilities + team info need lists
/digiflo	794	0	Feature list as bullets
/services (all)	~300 each	0	Specs, materials, capabilities lists
/blog-posts/10-things-labels	1,296	0	Perfect numbered list opportunity

3-4 hours effort

+20 pts per page

TIER 2

Important — Missing Infrastructure

These fixes don't show up in the scanner, but they control whether AI engines crawl your site in the first place. Think of Tier 1 as "make content understandable" and Tier 2 as "make content accessible." Without them, you're invisible no matter how good your content is.

5. Update robots.txt — Explicitly Allow AI Crawlers

Current: only Sitemap line

Many sites accidentally block AI crawlers. Being explicit guarantees your content gets indexed.

```
User-agent: *
Allow: /

# AI Search Engines - Explicitly Allowed
User-agent: GPTBot
Allow: /

User-agent: Google-Extended
Allow: /

User-agent: anthropic-ai
Allow: /

User-agent: ClaudeBot
Allow: /

User-agent: PerplexityBot
Allow: /

Sitemap: https://www.goldleafpackaging.com/sitemap.xml
```

10 min effort

Medium impact

6. Add Open Graph and Twitter Card Meta Tags

Not detected on any page

AI systems that surface web results (Perplexity, Bing Copilot) use OG data for rich previews. No OG tags = plain text links that get less attention.

```
<meta property="og:title" content="Custom Box Printing | GoldLeaf">
<meta property="og:description" content="Custom designed boxes...">
<meta property="og:image" content="../../../custom-boxes-og.jpg">
<meta property="og:url" content="../../../services/custom-boxes">
<meta name="twitter:card" content="summary_large_image">
```

1-2 hours effort

Medium impact

7. Add Canonical URLs

Not detected

The site redirects goldleafpackaging.com → www.goldleafpackaging.com. Without canonical URLs, AI engines may split citation authority between duplicates.

```
<link rel="canonical" href="https://www.goldleafpackaging.com/services/custom-
```

30 min effort

Medium impact

8. Enhance Sitemap with Metadata

Exists (56 URLs) but zero metadata

AI crawlers use `lastmod` to prioritize fresh content. The sitemap has 56 URLs but no `lastmod`, `changefreq`, or `priority` values.

1 hour effort

Medium impact

E-E-A-T Signals — Authority Building

Experience, Expertise, Authoritativeness, Trustworthiness — the signals AI uses to decide if GoldLeaf is credible. Without these, you may show up in AI search but not get cited. These signals separate GoldLeaf from anonymous blogs and offshore printers.

9. Add Author Attribution to Blog Posts

No author names on any content

Anonymous blog posts score lower than attributed ones. Add bylines ("By [Name], [Title] at GoldLeaf"), Person schema, and LinkedIn links.

1-2 hours effort

Medium impact

10. Add Publication and Update Dates

No visible dates on any content

AI systems prioritize fresh content. Blog posts with no date are treated as potentially outdated. Add publication dates visibly and in `datePublished` / `dateModified` schema.

1 hour effort

Medium impact

11. Surface Awards and Certifications

"Award-winning" is mentioned but no specific awards are displayed. The /about page mentions "50 years of collective experience" and "3.2k Clients / 4.3m Items" — great proof points that should be structured and highlighted.

1 hour effort

Medium impact

12. Improve Image Alt Text

Most images lack descriptive alt attributes

Bad: `alt=""` **Good:** `alt="Custom printed folding carton box with UV spot coating and gold foil stamping by GoldLeaf Print & Packaging"`

2-3 hours effort

Low-Medium impact

TIER 4

Content Strategy — Ongoing

Long-term content investments that compound over time. Once the technical foundation is in place (Tiers 1–3), this is how GoldLeaf becomes the authority that AI engines cite for packaging topics in Alabama and beyond.

13. Write "Answer-First" Content

AI engines extract direct answers. Content that leads with the answer gets cited more.

Current style: *"In the world of packaging, there are many factors to consider..."*

AEO-optimized: *"The best packaging materials for food products are: kraft paper, corrugated cardboard, and food-grade polyethylene. Here's when to use each..."*

14. Create "Best Of" and Comparison Content

Target the exact queries people ask AI assistants:

- "Best Packaging Materials for [Industry]" (cannabis, food, cosmetics)
- "Digital vs. Offset Printing: Which Is Right for Your Packaging?"
- "Custom Box Types: A Complete Guide"
- "Label Materials Compared: Paper vs. Film vs. Synthetic"

15. Add a Glossary or Knowledge Base

A `/glossary` page defining printing terms (GSM, dieline, substrate, CMYK, spot UV, etc.) creates dozens of citable definitions. AI systems frequently cite glossary entries.

Fix the Small Stuff

ISSUE	PAGE	FIX
"GoldLead" typo	/blog meta description	Change to "GoldLeaf"
Missing H1	/careers, /privacy-policy, /terms	Add H1 heading
6 H1 tags	/blog-posts/american-excellence	Demote 5 to H2
H1→H3 skip	/blog	Change card headings to H2
Missing meta description	/styles	Add 120-160 char description
8 short meta descriptions	Various blog + service pages	Expand to 120-160 chars

Implementation Roadmap

Four weeks, four milestones, 85+ score at the end. Each week builds on the last. Start Week 1 this week and GoldLeaf will be cited in AI search by mid-March.

Roadmap Roles

Agency: Marketing team implements (CMS changes, text edits). **Dev:** Requires web developer (code changes, schema markup). **Content:** Content writer/strategist (FAQ writing, blog restructuring). If your team doesn't have in-house dev, we recommend partnering with a developer for Week 2 tasks (8–9 hours total).

Week 1: Foundation — Target: 39 → 55

TASK	OWNER	HOURS
Create and deploy llms.txt	Agency	0.5
Update robots.txt with AI bot directives	Agency	0.25
Add Organization JSON-LD to site template	Agency/Dev	1
Add canonical URLs to template	Agency/Dev	0.5
Fix heading structure (5 pages)	Agency	0.5
Fix meta descriptions (9 pages)	Agency	1
Fix "GoldLead" typo	Agency	0.1

Week 2: Schema + OG Tags — Target: 55 → 65

TASK	OWNER	HOURS
Add LocalBusiness schema to homepage	Dev	0.5
Add FAQPage schema to /faq	Dev	0.5
Add Service schema to 6 service pages	Dev	2
Add BlogPosting schema to 38 blog posts	Dev	3
Add BreadcrumbList schema to all pages	Dev	1
Add OG + Twitter meta tags (template)	Dev	1
Enhance sitemap with lastmod/priority	Dev	1

Week 3: Content Restructuring — Target: 65 → 75

TASK	OWNER	HOURS
Add bullet lists to homepage	Content	1
Reformat service pages with specs lists	Content	3
Reformat "10 Things" blog as numbered list	Content	0.5

TASK	OWNER	HOURS
Add bullet lists to /about, /digiflo	Content	1
Add publication dates to blog posts	Content	1
Improve image alt text site-wide	Content	3
Add author bylines to blog posts	Content	1

Week 4: FAQ Expansion — Target: 75 → 85

TASK	OWNER	HOURS
Write FAQ sections for 6 service pages	Content	4
Write FAQ sections for top blog posts	Content	3
Add FAQPage schema to new FAQ sections	Dev	1
Create answer-first summaries on top blogs	Content	2
Surface awards/certifications on /about	Content	1

What We Need From This Call

Approval to proceed with Tier 1 fixes (4 items, ~12 hours effort, score impact: 39 → 55). If approved, we'll assign owners and start Week 1 immediately.

Alternative: Pilot Tier 1 only and re-scan after 2 weeks to validate the score lift before committing to Tiers 2–4.

Projected Score Trajectory

Four weeks from now, GoldLeaf will outrank 90% of custom printers in AI search.

MILESTONE	SCORE	GRADE	TIMELINE
Current	39	F	Today
After Week 1	~55	F	Week 1

MILESTONE	SCORE	GRADE	TIMELINE
After Week 2	~65	D	Week 2
After Week 3	~75	C	Week 3
After Week 4	~85	B	Week 4

How to Verify Progress

Re-scan after each phase using the AEO Scanner at: bai-aeo.vercel.app

Enter `goldleafpackaging.com` → Full Site scan → Compare scores.

The scanner checks 5 of the 15 signals above. For the others (llms.txt, robots.txt, OG tags, canonical URLs, alt text, E-E-A-T), manual verification or a follow-up audit session.
